Hybrid Pearl Millet
Product Profile

This hybrid pearl millet has excellent grazing and haying potential. Graze King millet has little or not prussic acid, with good re-growth after clipping. Clippings should be done in the pre-boot stage. Graze King makes excellent pasture on soil that is low in iron. Under good conditions this hybrid is 5 to 6 feet tall in the pre-boot stage.

PLANTING: Recommended seeding rate is 8 pounds per acre on dryland and 20 to 25 pounds on irrigated land or high rainfall areas. Seeding rates can vary according to conditions and locality. Thicker stands produce finer stalks, but are less drought resistant.

HARVESTING: For best feed quality, clipping should be done in the pre-boot stage. Grazing should begin when plants are approximately 25 inches tall. Avoid grubbing to the ground to allow the best regrowth.
