

Hybrid BMR Forage Sorghum

Product Profile

- Excellent green leaf retention
- Very Sweet and soft stems
- Large tannin free grain panicles

This forage sorghum hybrid is "Brown midrib" and has a very sweet stem and exceptional green leaf retention. Large semi-compact panicles of white grain on 2.0 to 2.75 m stems produce high grain yield and almost as much sugar per unit area (about double the normal carbohydrates of regular sorghum forage). With its 40-60% reduction in lignin and substantial increase in palatability, this new forage silage (or hay) increases significantly "relative feed values".
